

**Name**                      **Date**                      **Task**

**Work out the amount of tiles needed to complete the task plus 10% for wastage**

Amount of tiles being used in length x amount of tiles being used in height =

**Plus 10%**

Amount+10%=

**Work out the length/height of the area to be tiled in order to mark out on the wall the edge of the tiled area**

Length of a tile (L):                      mm

Height of a tile (H):                      mm

L x Amount of tiles being used in length = **A**

H x amount of tiles being used in height = **B**

Thickness of a tile spacer:                      mm

Amount of Joints:

Thickness of tile spacer x amount of joints in the Length = **C**

Thickness of tile spacer x amount of joints in the Height = **D**

Overall Length

**A+C=**

Overall Height

**B+D=**
